

Fact Sheet

Introducing Orion Health

Orion Health is a leading provider of clinical workflow and integration technology for the healthcare sector.

Orion Health's clinical information software meets the information needs of clinical staff and healthcare managers, delivering secure, universal access to healthcare information and helping healthcare providers proactively manage and coordinate patient care across the community.

Orion Health's integration and messaging products streamline the exchange of healthcare data within organizations and between business partners.

History

Orion Health was founded in Auckland, New Zealand in 1993, with five employees. Since its inception, Orion Health has experienced rapid growth, and today more than 200 employees supply technology and services to 1,000 clients in 20 countries. Orion Health has offices in the United States, Canada, the United Kingdom, Australia and New Zealand.

Products

Orion Health's software products are used around the world to support better care and enhance the exchange of healthcare data. They are co-developed with clinicians and other healthcare professionals to ensure ease of use and functionality. Orion Health's products support industry standards such as HL7, XML, CCOW and HIPAA message sets.

Concerto™ Medical Applications Portal is a single sign-on clinician portal that connects multiple hospital information systems, to provide a secure 'single patient view' of data across all clinical applications. Concerto™ provides a secure and consistent graphical environment that supports the ways that clinicians interact with data and eliminates the need for clinicians to sign-on multiple times to separate applications to view patient records.

Concerto™ Clinicals is a set of software applications that help manage and support the clinical process within hospital and community environments. Concerto™ Clinicals applications include solutions for disease management, clinical notes, discharge summaries, e-prescribing and computerized physician order entry (CPOE), Enterprise Master Patient Index (EMPI) and an electronic provider index.

Rhapsody™ Integration Engine is a powerful integration engine that delivers advanced inter-system messaging capabilities to health sector organizations of all kinds. Rhapsody™ is designed for rapid, effortless installation and use, and enables quick accurate and efficient exchange of electronic data.

Symphonia™ Messaging and Mapping Tools are the world's leading software toolkit for the rapid integration of multiple, different systems. Symphonia™ enables vendors, consultants and other developers to rapidly add industry-standard messaging capabilities to new, existing and legacy systems.

Professional Services

Orion Health's comprehensive consulting expertise complements our product strengths. We help clients plan, implement and derive value from our solutions quickly and effectively. Services offered by Orion Health include clinical consulting by qualified medical practitioners, project management, business / systems analysis, solution design, implementation and systems integration / interfacing.

Customers & Partners

Orion Health contributes to integration and clinical workflow projects across the globe for clients including Abbott Laboratories, New York State Department of Health, Capital Health, New South Wales Health, and the New Zealand Ministry of Health.

Orion Health's client community reflects the range of services provided by the healthcare industry throughout the world, and encompasses hospitals, regional and national health authorities, insurance clearinghouses, health IT vendors and research institutions.

Orion Health's growing network of partners includes leaders in technology and services such as Oracle Corporation, LogicaCMG, Sierra Systems, Philips Medical Systems and Hewlett-Packard.
